Review

"It use part of a series that aims to provide radiologists in training with an overview of the subject that could be reasonably assimilated in a short space of time when coming new to a subject, in this case nuclear medicine. It has clearly become more comprehensive over the years as the speciality has increased in scope, and with the increasing need for recertification, it is how aimed at providing concise information for established radiologists...There are many good features to this book. The first part describing the basic principles of nuclear medicine is a particularly valuable resource to somebody coming to the subject for the first time...The answer to most questions that one would meet in day-to-day practice can be found in this book. I both enjoyed it and think it does what it says on the packet."

Was nearly perfect.

By Dr.N.

I've bought all of the older 3 editions of this book. It was very well organised. You cant learn physics and fundamental concepts from Mettler. So its technical data is much more better than Mettlers. But in new edition, grey colored tables, redacted clinical details disappointed us. I suggest editor to review Mettlers appendices which is very very helpful for clinicians. The superiority of the requisites is its pathophysiology schemes, colored tables etc. All of the clinical data is summerized first (eg. clinics of sarcoidosis before its imaging). I've given 6 stars for older editions. But you have to revise it again. I love this book and I want to buy new editions of it again. I suggest beginners to begin with The Requisites and to add Metlers for clinical details and images.

Also needs to include AU/RISE section like Mettler book to be more complete but overall felt ...

Easier to read than prior edition. A must read for anyone taking ABR or ABNM exams. Definitely has answers to many exam questions in this text. Physics is lacking. Needs more on new neuro tracers. Also needs to include AU/RISE section like Mettler book to be more complete but overall felt it was better than Mettler if you had to choose only one text for NM review.

Nuclear Medicine: The Requisites (4th Edition)

By Dr. Mena

Poorly worded. Sounds like someone just grouped facts into paragraphs and called it a book. Very difficult to read, and should be properly edited. For something less dry, I recommend Mettler.
