Read this book

By E. Brown

Parents and teachers read this book. This book answers the question "Why do some people seem to just get math and others are always struggling." She gives easy to understand reasons and explanations to helping kids understand math based on development not math books. She includes four critical concepts that most math programs fail to include. Information is applicable to preschool through adult education levels. I bought one for myself, I work with a developmental math program at the community college level, and one for my daughter with a four and seven year old.

PREPARING THE PATH FOR LEARNING MATH

By Ed Madsen

This book is all about making math a positive experience for children and adults too. Oh, how I wish I had these insights when my kids were in grade school. That is why I ordered a copy for my daughter to help her two, in kindergarten and second grade, enjoy math rather than dread it.
